EXPERIENCE

Senior Software Engineer

Sept 2022 — present

CMC Markets

- Contribute to the development, maintenance and modernisation of a large-scale trading platform.
- Led the development of the Transaction History micro-frontend, including an in-house data table with sorting, filtering and pagination, and implemented virtual scrolling to efficiently handle large datasets while maintaining a responsive user experience.
- Led the development of the TradingView Charts micro-frontend, integrating TradingView charts with company data and internal systems and delivering a range of custom features required to support the integration.
- Drive the migration of platform features towards micro-frontend architecture, supporting a more modular frontend codebase.
- Migrate existing AngularJS and React components to Web Components, helping modernise the technology stack and improve component reusability.
- Built a Figma CLI tool that extracts designs from Figma and generates Web Components, improving the workflow between design and frontend implementation.

Senior Software Engineer

Feb 2021 — Sept 2022

Mimecast

- Maintained and enhanced multiple Angular applications used across the organisation.
- Designed and implemented reusable frontend components for different applications.
- Migrated legacy applications to newer versions of Angular, helping modernise the frontend technology stack.
- Improved unit test coverage and contributed to overall frontend code quality and maintainability.

SKILLS

HTML · CSS · JavaScript · TypeScript · Web Components · Go · Node.js · Jest · Playwright · Vite · SQLite · Git · Accessibility · Performance · Design Systems · Micro Frontends · Figma · Claude code

PROJECTS

Rminder

A fast, minimal task management app built for individuals. No subscriptions, no complexity — just your work.

Seda

A scripting language designed for simplicity.

Figo

Figma components exporter lib to help creating HTML and CSS from Figma designs.

Folha

Canvas based text editor.

Developer → Technical Specialist

May 2015 — Feb 2021

IG Group

Progressed through multiple frontend engineering roles, taking on increasing responsibility for frontend architecture, performance, tooling, testing and technical improvements.

- Investigated and evaluated new technologies and solutions for frontend projects.
- Led initiatives focused on website performance, achieving a 10% performance improvement.
- Led the implementation of frontend unit and integration testing solutions.
- Created automatically generated technical documentation for frontend projects.
- Developed internal tooling using Node.js, Web Components and Electron for use across engineering teams.
- Built a static page generator for white-label landing pages.
- Developed and maintained reusable components, widgets and templates for the company's main websites built on Adobe Experience Manager (AEM).
- Worked with modern JavaScript/ECMAScript, TypeScript, HTML5, CSS3 and LESS in the development of enterprise web applications.

Front-end Developer

2011 — Apr 2015

Asseco PST

- Developed and maintained web-based banking applications consuming RESTful services.
- Worked closely with designers and backend engineers to deliver banking software solutions.
- Developed frontend components and plugins for processing JSON data from REST APIs.
- Implemented customer, entity and account creation workflows using Spring Web Flow.
- Developed a money transfer module covering transfer creation and associated operations including editing, copying, cancelling and deleting transfers.
- Implemented the company website using IBM Web Content Manager (IBM WCM).
- Worked with JavaScript, jQuery, HTML, CSS, AJAX, JSON, Java and Spring technologies.

EDUCATION

Universidade da Madeira

2011

Licentiate degree, Computer Science
